# CENTER FOR CLINICAL RESEARCH

The CTD Research Center (Pain Therapy Clinic) was created with the aim of expanding activities beyond the care of patients with acute or chronic pain. The Center's purpose is to conduct clinical studies in multiple areas, working toward innovations in knowledge and the technical/scientific improvement in the care of human beings.

Since it was founded, the Research Center has been under the leadership and supervision of Dr. Durval Kraychete, who, in addition to acting as Principal Investigator, is also an Associate Professor in the Department of Anesthesiology and Surgery at the Federal University of Bahia (UFBA) School of Medicine as well as creator and Coordinator of the Pain Outpatient Center at this University.

## **HIGH QUALITY, HIGH IMPACT RESEARCH THAT BENEFITS SOCIETY.**

The CTD Research Center's technical and infrastructure capability allows us to conduct phase II, III and IV clinical research in partnership with the pharmaceutical, food, biotechnology, cosmetic, and medical device industries as well as Clinical Research Organizations (CROs), universities, and research centers in Brazil and abroad. We also conduct studies initiated by our own researchers.

Our Research Center offers all the necessary infrastructure for investigation, with equipped offices, drug infusion rooms, nursing care structure, a team of researchers and Study Coordinators, technical-scientific support and regulatory support.

# MISSION AND VISION

## **Mission:**

To conduct Clinical Research that contributes to innovations in knowledge and technical/scientific improvement in the care of human beings, maintaining excellence in products and services, with ethics, competence, honesty and respect for nature.

## **Vision:**

**For the Clinical Research Center to be recognized as a national leader, based on the principles of Good Clinical Practice (ICH/GCP) and applicable legislation.**
